SIT753 Pass Task
Unit Planning

In this unit, I want to deepen my understanding of IT concepts, especially those related to web development, software engineering, and system design. Since I aim to build scalable SaaS products and improve my React fundamentals, this unit will help strengthen my technical foundation. It also aligns with my long-term goal of becoming a skilled developer and entrepreneur, allowing me to apply these concepts to real-world projects, freelancing, and my startup ideas.

We(Me, Joshua and Omar) have mutually decided to form up a team of three, and we are in Group No - 84

I'm targeting a high distinction because I want to truly understand and apply what I learn, not just pass. Since I'm investing time and money into this degree, I want to make the most of it. Moreover, high distinction can also help me land a job more easier.

I have successfully registered myself by participating in the Hoban Mock Interview, which will take place between Weeks 8 and 9.
